Hello Mr. Wittmer,

Soil testing is separate from the testing that Ms. Bradley is overseeing. The initial quote that we received for the soil testing of the beach was \$30,000, which we found to be outrageous. We have asked another firm for a quote and have not received one as of current. We met with FEMA the week before last and they will assist with the costs for the soil testing and I believe that they can link this to our expedited funding request. However, we would like to see that cash flow come in from FEMA prior to proceeding with the initial company.

I apologize for my delayed response on this matter.

Thank you!

Olivia:

Please see below reply to me from Dana Bradley regarding VOC test results for the beach. Are we awaiting VOC tests of the beach sand, or are we ready to proceed with the beach rehab? When you have time, do let me know.

Thanks,
George

We only tested the lake, but each area tested negative for all VOC's. The Army Corps may do other testing later.

Subject: Beach rehabilitation

Hi Dana:

Any lab results back for beach soil VOCs? We are still looking to proceed with our offer of rehabilitation of the Town's beach, and will be very glad for a go-ahead.

Thanks,

George
